IDE – Integrated Development Environment

VS Code

Visual Studio Code (VS Code) is a lightweight, open-source code editor developed by Microsoft, renowned for its versatility across various programming languages and frameworks. Its extensible architecture allows developers to tailor the editor to their specific needs, making it a popular choice for web development projects involving HTML, CSS, JavaScript, React, and Angular.

Pros of VS Code

1. Free & Open Source
2. Lightweight and Fast
3. Extensible via Extensions
4. Built-in Git Integration
5. Integrated Terminal
6. Cross-Platform
7. AI Code Assistance (GitHub Copilot)

Cons of VS Code

1. Not a Full IDE by Default
2. Performance Can Lag in Large Projects
3. Extension Overload / Quality Control
4. Configuration Overhead
5. Limited Native Language Support
6. Security Risks with Extensions

Extensions for HTML Development

1. HTML Snippets
2. Prettier – Code Formatter
3. Live Preview
4. Auto Rename Tag
5. Auto Close Tag
6. IntelliSense for CSS class names in HTML
7. Path Intellisense
8. CSS Peek
9. Highlight Matching Tag
10. Color Highlight

What is HTML?

- ▶ HTML is essentially a markup language used to create documents that web browsers can open and display as websites.
- ▶ These documents are structured using HTML elements (tags), which define different parts of the content, such as headings, paragraphs, images, links, tables, and forms.
- ▶ HTML documents are plain text files with the .html or .htm extension
- ▶ A web browser (Chrome, Firefox, Edge, Safari, etc.) interprets the HTML code and displays it as a structured webpage.
- ▶ HTML allows embedding of CSS (for styling) and JavaScript (for interactivity) to enhance the webpage.

History of HTML?

- 1989 - Tim Berners-Lee Proposes the Web**

- Tim Berners-Lee, a British scientist at CERN (European Organization for Nuclear Research), introduced the concept of the World Wide Web (WWW) and developed the first version of HTML.

- 1991 - HTML 1.0**

- The first publicly available version, containing basic elements like headings, paragraphs, and links.

- 1995 - HTML 2.0**

- The first standardized version by the Internet Engineering Task Force (IETF), including form elements.

- 1997 - HTML 3.2**

- Introduced support for tables, scripting, and more presentational elements.

- 1999 - HTML 4.01**

- Introduced Cascading Style Sheets (CSS) for better styling and improved accessibility.

- 2000 - XHTML 1.0**

- A stricter, XML-based version of HTML.

- 2014 - HTML5**

- Introduced new elements like `<header>`, `<footer>`, `<section>`, `<article>`, `<video>`, `<audio>`, and improved support for modern web applications.

Why do we need HTML?

HTML is essential because:

- ▶ **It Defines the Web's Structure**
Without HTML, browsers would not understand how to display content properly.
- ▶ **It Is Platform-Independent**
HTML works across all operating systems and devices, making it universally accessible.
- ▶ **It Is Easy to Learn and Use**
Its simple syntax makes it a beginner-friendly language for web development.
- ▶ **It Supports Modern Web Applications**
HTML5 supports advanced features like offline storage, geolocation, and responsive design.
- ▶ **It Forms the Basis of Web Technologies**
It works alongside CSS (for styling) and JavaScript (for functionality) to create interactive and visually appealing websites.

Let's know about - WWW

WWW (World Wide Web) is a system of interlinked hypertext documents accessed via the Internet. Using a web browser, users can view webpages that may contain text, images, videos, and other multimedia, and navigate between them using hyperlinks.

Let's know about - WWW

WWW (World Wide Web) is a system of interlinked hypertext documents accessed via the Internet. Using a web browser, users can view webpages that may contain text, images, videos, and other multimedia, and navigate between them using hyperlinks.

How and When WWW Evolved?

Timeline	Event
1989	Tim Berners-Lee , a British scientist at CERN, proposed the idea of a distributed information system to facilitate automatic information-sharing among scientists.
1990	Berners-Lee developed the first web browser (WorldWideWeb , later renamed Nexus) and the first web server (info.cern.ch).
1991	The World Wide Web was made publicly available on the Internet.
1993	Mosaic , the first user-friendly graphical browser, was released by NCSA. This led to the explosion in web popularity.
1994	W3C (World Wide Web Consortium) was founded by Tim Berners-Lee to guide the development of web standards.

Let's know about - WWW

Who Manages WWW?

The World Wide Web is not owned by anyone, but several organizations help **manage and standardize** it:
1.W3C (World Wide Web Consortium) – Develops protocols and guidelines to ensure long-term growth of the Web.

1. Founder: Tim Berners-Lee
2. Website: w3.org

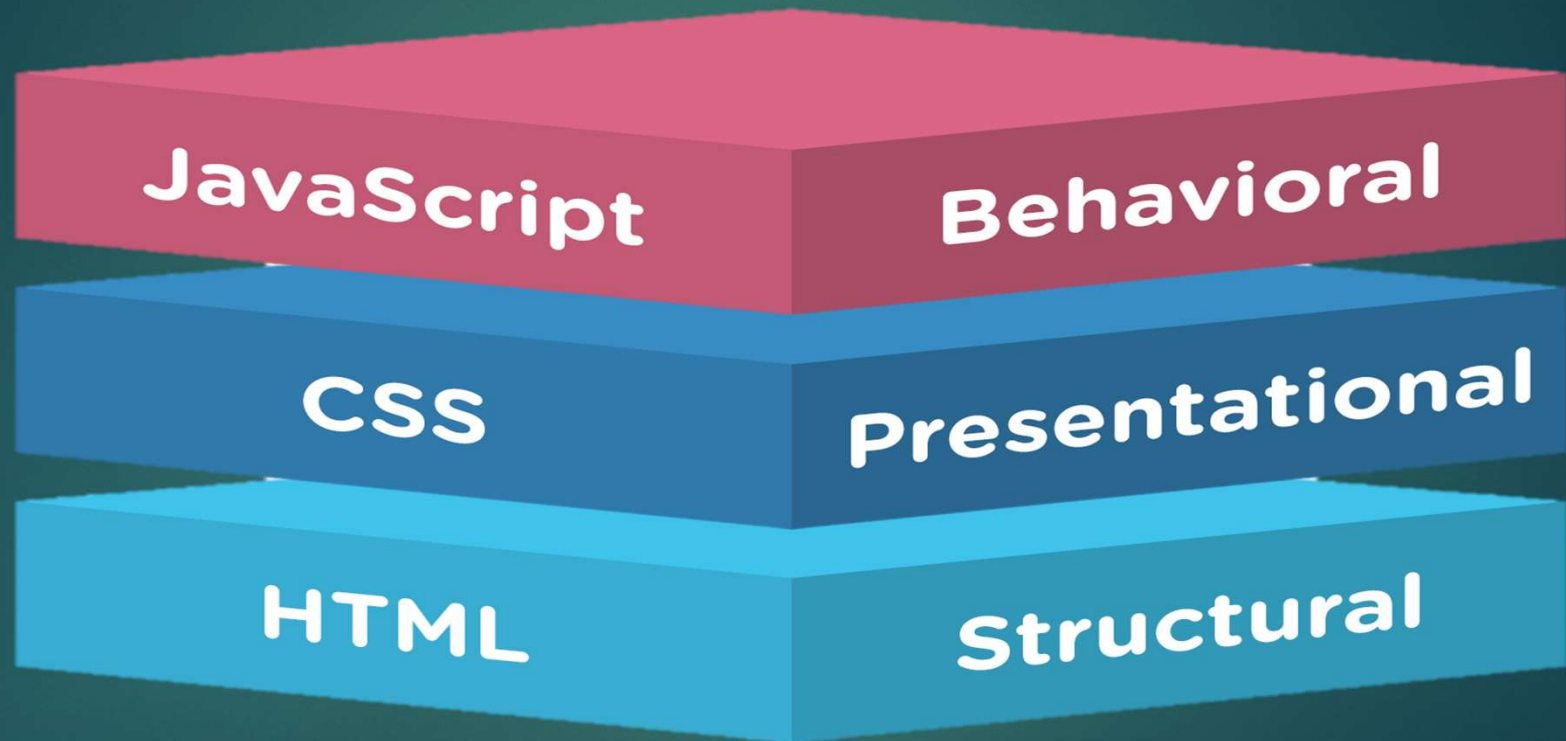

2.ICANN (Internet Corporation for Assigned Names and Numbers) – Manages domain names and IP address allocation.

3.IETF (Internet Engineering Task Force) – Develops and promotes voluntary Internet standards, especially related to TCP/IP.

What are HTML tags?

- ▶ HTML tags are the building blocks of an HTML document. They define the structure and content of a webpage by enclosing elements within angle brackets (<>). Tags are used to create headings, paragraphs, links, images, tables, forms, and much more.

Basic Structure of an HTML Tag

- ▶ An HTML tag generally consists of:
- ▶ Opening Tag: <tagname> – Starts the element.
- ▶ Content: The actual text or other HTML elements inside the tag.
- ▶ Closing Tag: </tagname> – Ends the element (except self-closing tags)

<p>This is a paragraph.</p>

Types of HTML Tags & Their Usage

Basic Structure Tags

These tags define the **basic structure** of an HTML document.

BasicHTMLPageStructure.html

Tag	Description	Example
<html>	Defines the root of an HTML document	<html>...</html>
<head>	Contains metadata (title, CSS, scripts)	<head>...</head>
<title>	Sets the webpage title	<title>My Website</title>
<body>	Defines the visible content of the page	<body>...</body>

```
<!DOCTYPE html>
<html>
<head>
  <title>My First Page</title>
</head>
<body>
  <h1>Welcome to My Website</h1>
</body>
</html>
```

Types of HTML Tags & Their Usage

Basic Structure Tags

These tags define the **basic structure** of an HTML document.

BasicHTMLPageStructureWithDetails.HTML

<html> Tag

The <html> tag is the root of an HTML document. It wraps the entire web page code.

<head> Tag

The <head> tag contains meta-information about the document, such as the title, character set, links to stylesheets, etc.

<title> Tag

The <title> tag defines the title of the page. You can see it in the browser tab. For this page, it is set as: **HTML Tags Demo - ChiPi Technologies**.

<body> Tag

The <body> tag contains all the visible content of the web page like headings, text, images, links, lists, etc. Everything you see here is inside the <body> tag.

Types of HTML Tags & Their Usage

Text Formatting Tags

Used to format text inside an HTML document.

TextFormattingTags.html

Tag	Description	Example
<h1> to <h6>	Headings (H1 is the largest, H6 is the smallest)	<h1>Main Heading</h1>
<p>	Paragraph	<p>This is a paragraph.</p>
	Bold text	Bold
<i>	Italic text	<i>Italic</i>
<u>	Underlined text	<u>Underline</u>
	Important (bold) text	Important
	Emphasized (italic) text	Emphasized

<p>This is a bold and <i>italic</i> text.</p>

Types of HTML Tags & Their Usage

Text Formatting Tags

Used to format text inside an HTML document.

[TextFormattingTagsDetails.html](#)

Tag	Description
<h1> to <h6>	Headings of different levels (main to sub-sub sections)
<p>	Paragraph text
	Strong emphasis (usually bold)
	List item inside
	Unordered (bulleted) list
<hr>	Horizontal line for section separation
<code>	Displays text as code (monospace font)

Types of HTML Tags & Their Usage

List Tags

Used to create lists (ordered/unordered).
ul-ol-and-li.html

Tag	Description	Example
	Unordered list (bullets)	Item 1
	Ordered list (numbers)	Item 1
	List item	List Item

```
<ul>  
  <li>Apple</li>  
  <li>Banana</li>  
</ul>
```

Types of HTML Tags & Their Usage

Ordered List Tags

The `` tag is used to **create an ordered (numbered) list** in HTML. It automatically numbers each list item using `` tags.

orderedList.html

Tag	Description	Example
<code></code>	Unordered list (bullets)	<code>Item 1</code>
<code></code>	Ordered list (numbers)	<code>Item 1</code>
<code></code>	List item	<code>List Item</code>

```
<ul>
  <li>Apple</li>
  <li>Banana</li>
</ul>
```

Types of HTML Tags & Their Usage

What is the <a> Tag

- The <a> tag stands for **anchor**.
- It is used to create **hyperlinks** in HTML.

Can link to:

- Web pages
- Email addresses
- Phone numbers
- File downloads
- Sections within the same page

```
<a href="http://chipitechnologies.com">Visit ChiPi Technologies</a>
```

Types of HTML Tags & Their Usage

<a> Tag

Types of Links

Use Case	Example
External website	<code>Google</code>
Internal section	<code>Go to Contact</code>
Email link	<code>Email Us</code>
Phone call	<code>Call Us</code>
Download file	<code>Download Brochure</code>

Types of HTML Tags & Their Usage

<a> Tag

Open Link in New Tab

```
<a href="https://chipitechnologies.com" target="_blank">Open in New Tab</a>
```

Types of HTML Tags & Their Usage

<a> Tag

Why Use rel="noopener"?

```
<a href="https://google.com" target="_blank" rel="noopener">Safe Link</a>
```

Purpose of rel="noopener"

- Prevents the new tab from accessing the original page (window.opener)
- Protects your site from being redirected or attacked

Best Practice

Use rel="noopener" with every target="_blank".

Types of HTML Tags & Their Usage

<a> Tag

Anchor to Same Page Section

<!-- Navigation link --> About Us

<!-- Target section --> <h2 id="about">About ChiPi</h2>

- Useful for **in-page navigation**.
- The href links to an id in the same page.

Types of HTML Tags & Their Usage

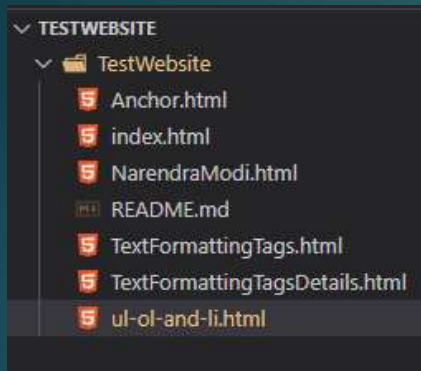

<a> Tag

Important Points

- Use <a> to create hyperlinks
- Use target="_blank" to open in a new tab
- Always pair target="_blank" with rel="noopener" for security
- Use #id to link within the same page
- Use mailto: and tel: for email and phone links

Types of HTML Tags & Their Usage

Element	Description
<address>	Indicates that the enclosed HTML provides contact information for a person or people, or for an organization.
<article>	Represents a self-contained composition in a document, page, application, or site, which is intended to be independently distributable or reusable (e.g., in syndication). Examples include a forum post, a magazine or newspaper article, a blog entry, a product card, a user-submitted comment, an interactive widget or gadget, or any other independent item of content.
<aside>	Represents a portion of a document whose content is only indirectly related to the document's main content. Asides are frequently presented as sidebars or call-out boxes.
<footer>	Represents a footer for its nearest ancestor sectioning content or sectioning root element. A <footer> typically contains information about the author of the section, copyright data, or links to related documents.
<header>	Represents introductory content, typically a group of introductory or navigational aids. It may contain some heading elements but also a logo, a search form, an author name, and other elements.
<section>	Represents a generic standalone section of a document, which doesn't have a more specific semantic element to represent it. Sections should always have a heading, with very few exceptions.

HeaderAndFooter.html, articletag.html, asidetag.html, addresstag.html, AddressHeaderFooterAsideArticleTags.html

Types of HTML Tags & Their Usage

Element	Description
<hgroup>	Represents a heading grouped with any secondary content, such as subheadings, an alternative title, or a tagline.
<main>	Represents the dominant content of the body of a document. The main content area consists of content that is directly related to or expands upon the central topic of a document, or the central functionality of an application.
<nav>	Represents a section of a page whose purpose is to provide navigation links, either within the current document or to other documents. Common examples of navigation sections are menus, tables of contents, and indexes.

Types of HTML Tags & Their Usage

Element	Description
<a>	Together with its href attribute, creates a hyperlink to web pages, files, email addresses, locations within the current page, or anything else a URL can address.
 	Produces a line break in text (carriage-return). It is useful for writing a poem or an address, where the division of lines is significant.
<code>	Displays its contents styled in a fashion intended to indicate that the text is a short fragment of computer code. By default, the content text is displayed using the user agent's default monospace font.
<mark>	Represents text which is marked or highlighted for reference or notation purposes due to the marked passage's relevance in the enclosing context.
<q>	Indicates that the enclosed text is a short inline quotation. Most modern browsers implement this by surrounding the text in quotation marks. This element is intended for short quotations that don't require paragraph breaks; for long quotations, use the <u><blockquote></u> element.
<small>	Represents side-comments and small print, like copyright and legal text, independent of its styled presentation. By default, it renders text within it one font size smaller, such as from small to x-small.
<sup>	Specifies inline text which is to be displayed as superscript for solely typographical reasons. Superscripts are usually rendered with a raised baseline using smaller text.

AnchorLineBreakBlockquoteCodeMarkSmallSup.HTML

Types of HTML Tags & Their Usage

Element	Description
<sub>	Specifies inline text which should be displayed as subscript for solely typographical reasons. Subscripts are typically rendered with a lowered baseline using smaller text.
<time>	Represents a specific period in time. It may include the datetime attribute to translate dates into machine-readable format, allowing for better search engine results or custom features such as reminder

Types of HTML Tags & Their Usage

Element	Description
<div>	<p>The <div> tag is one of the most widely used tags in HTML, especially in web page structure and layout design</p> <ul style="list-style-type: none">• <div> stands for "division".• It is a generic container used to group together related HTML content.• It has no visual effect by default — its power comes when you apply CSS or JavaScript to it.

```
<div>
  <h2>ChiPi Technologies</h2>
  <p>Learn Web Development with hands-on training.</p>
</div>
```

Types of HTML Tags & Their Usage

Element	Description
<abbr>	Represents an abbreviation or acronym and it's especially useful when you want to provide the full meaning of shortened terms to users — often via a tooltip on hover .

```
<p>  
  Our <abbr title="Full Stack Development">FSD</abbr> course covers all layers of web  
development including  
  <abbr title="HyperText Markup Language">HTML</abbr>,  
  <abbr title="Cascading Style Sheets">CSS</abbr>, and  
  <abbr title="JavaScript">JS</abbr>.  
</p>
```

Types of HTML Tags & Their Usage

Element	Description
<audio>	Used to embed sound content in documents. It may contain one or more audio sources, represented using the src attribute or the source element: the browser will choose the most suitable one. It can also be the destination for streamed media, using a MediaStream.
	Embeds an image into the document.
<video>	Embeds a media player which supports video playback into the document. You can also use <video> for audio content, but the audio element may provide a more appropriate user experience.

Types of HTML Tags & Their Usage

Link and Media Tags

Used for **hyperlinks, images, and media.**

Tag	Description	Example
<a>	Creates a hyperlink	Click Here
	Displays an image	
<video>	Embeds a video The controls attribute adds video player controls so users can interact with the video.	<video controls><source src="video.mp4" type="video/mp4"></video>
<audio>	Embeds an audio file	<audio controls><source src="audio.mp3" type="audio/mpeg"></audio>

  <dt>DBMS</dt>  
  <dd>Database Management System – software used to store, manage, and retrieve data efficiently.</dd>  
</dl>
```

HTML	HyperText Markup Language – the standard language for creating webpages.
CSS	Cascading Style Sheets – used to style and layout HTML elements.
JavaScript	A programming language that allows you to create dynamic and interactive web content.
DBMS	Database Management System – software used to store, manage, and retrieve data efficiently.

HTML Form Tags

Client-Server Architecture

Types of HTML Tags & Their Usage

Form Tags

HTML provides several elements that can be used together to create forms that the user can fill out and submit to a website or application. Used to collect user input.

Tag	Description	Example
<form>	Creates a form	<form>...</form>
<input>	Input field (text, email, password)	<input type="text">
<textarea>	Multi-line input field	<textarea>...</textarea>
<button>	Clickable button	<button>Submit</button>
<select>	Dropdown menu	<select><option>Choice</option></select>

```
<form action="submit" method="post">  
  <label for="name">Name:</label>  
  <input type="text" id="name" name="name">  
  <button type="submit">Submit</button>  
</form>
```

Types of HTML Tags & Their Usage

Form Tags

Used to collect user input.

Tag	Description
<form>	Creates a form
<input>	Input field (text, email, password, submit, reset)
<label>	It is used to define a caption or description for a form control like <input>, <select>, or <textarea>, improving accessibility and usability by allowing users to click the label to focus or activate the associated input field.
<input type="submit">	Submits the form data to the server or triggers the onSubmit event handler in JavaScript.
<input type="reset">	Resets all form fields to their initial values when the form was loaded.

Form-Form Textbox Label Submit Reset.html

Types of HTML Tags & Their Usage

Form Tags

Used to collect user input.

```
<form>  
  <label for="fname">First Name</label>  
  <input type="text" placeholder="Enter the first name" name="firstname" id="fname" />  
  <label for="lname">Last Name</label>  
  <input type="text" placeholder="Enter the last name" name="lastname" id="lname" />  
  <input type="reset" value="Cancel" />  
  <input type="submit" value="Save" />  
</form>
```

First Name

Last Name

Types of HTML Tags & Their Usage

Form Tags

Used to collect user input.

Tag	Description
<code><input type="radio"></code>	Allows the user to select only one option from a group of choices.
<code><input type="checkbox"></code>	Lets the user select one or more options independently.
<code><input type="button"></code>	Creates a clickable button that performs an action when triggered via JavaScript (no default behavior).

Types of HTML Tags & Their Usage

Form Tags

Used to collect user input.

```
<form>
  <input type="radio" id="GUI" name="TechnologyName" value="GUI">
  <label for="GUI"><b>Graphical User Interface</b></label><br>
  <input type="radio" id="Backend" name="TechnologyName" value="Backend">
  <label for="Backend"><b>Backend Programming</b></label><br>
  <input type="radio" id="ML" name="TechnologyName" value="ML">
  <label for="ML"><b>Machine Learning</b></label><br>

  <label for="PythonCourse"><b>Python Language</b></label><br>
  <input type="button" value="Proceed" id="proceedButton" onclick="alert('Hello World!')" />
  <input type="button" value="Cancel" id="cancelButton" onclick="alert('Hello World!')" />
</form>
```

form-CheckBox Radio Button and Button.html

Select the course you are interested in.

Name attribute is used to create a group of radio buttons.

The radio with the same name will be considered as members of the group.

value attribute is used to set the value of the radio button.

- ☐ Graphical User Interface
- ☐ Backend Programming
- ☐ Machine Learning

- ☐ C Language
- ☐ C++ Language
- ☐ Java Language
- ☐ Python Language

Types of HTML Tags & Their Usage

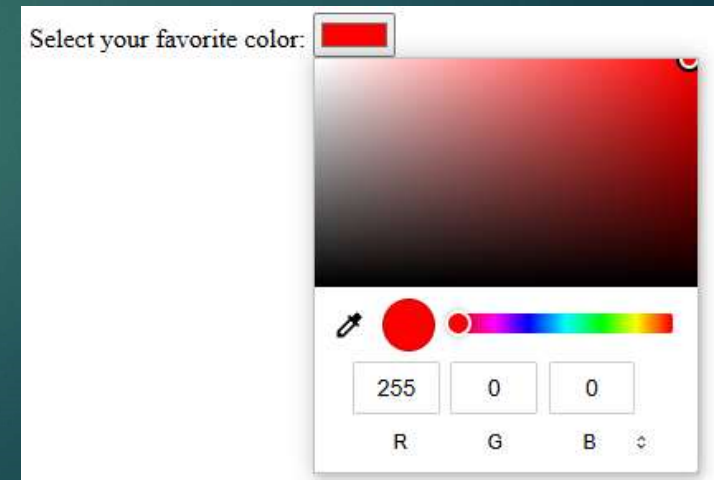

Form Tags

Used to collect user input.

Tag	Description
<code><input type="color"></code>	element displays a color picker , allowing users to select a color which is submitted as a hexadecimal value (e.g., #ff0000).

```
<form>  
  <label for="favcolor">Select your favorite color:</label>  
  <input type="color" id="favcolor" name="favcolor" value="#ff0000">  
</form>
```

form-Input Type - Color.html

Types of HTML Tags & Their Usage

Form Tags

Used to collect user input.

Tag	Description
<input type="password">	Creates a secure input field where the entered text is hidden (masked) as dots or asterisks.
<select>	The <select> tag is used to create a drop-down list of options in a form, allowing the user to select one (or multiple, if specified) from a list of predefined choices, typically paired with <option> tags.
<input type="date">	Provides a calendar-based date picker for selecting a specific date in YYYY-MM-DD format.

Types of HTML Tags & Their Usage

Form Tags

Used to collect user input.

```
<form>
```

```
  <label for="password">Password:</label>
```

```
  <input type="password" id="password" name="password" value="password">
```

```
  <input type="button" value="Show Password" id="showPasswordButton"/>
```

```
  <label for="quantity">Quantity:</label>
```

```
  <select id="quantity" name="quantity" multiple size="6">

Types of HTML Tags & Their Usage

Form Tags

Used to collect user input.

Tag	Description
input type="date"	<input> elements of type="date" create input fields that let the user enter a date. The appearance of the date picker input UI varies based on the browser and operating system. The value is normalized to the format yyyy-mm-dd.

Attribute	Description
min	Sets the earliest allowed date
max	Sets the latest allowed date
value	Sets the default date
required	Makes it mandatory to select a date
readonly	Allows viewing but not changing the date
disabled	Disables the input completely

Types of HTML Tags & Their Usage

Form Tags

Used to collect user input.

ChiPi Technologies - Date of Birth Input Examples

1. Basic DOB Input:

dd-mm-yyyy 

2. DOB with Age Restriction (18-40 yrs):

dd-mm-yyyy 

3. DOB with Default Value:

01-01-2000 

4. Required DOB (Mandatory Field):

dd-mm-yyyy 

5. Read-Only DOB (View Only):

15-05-1998

6. Disabled DOB (Not Editable):

01-12-1995

Details and Summary.html

Quiz

1. What does HTML stand for?

- A) HighText Machine Language
- B) HyperText and links Markup Language
- C) HyperText Markup Language
- D) None of these

Answer: C

Explanation: HTML stands for HyperText Markup Language used to create web pages.

Quiz

2. Which HTML tag is used to define an internal style sheet?

- A) <css>
- B) <script>
- C) <style>
- D) <link>

Answer: C

Explanation: The <style> tag defines internal CSS inside the <head> section.

Quiz

3. Which attribute is used to provide a unique identifier in HTML?

- A) class
- B) name
- C) id
- D) key

Answer: C

Explanation: The id attribute uniquely identifies an element.

Quiz

4. Choose the correct HTML element for the largest heading:

- A) <heading>
- B) <h6>
- C) <h1>
- D) <head>

Answer: C

Explanation: <h1> is the largest and most important heading.

Quiz

5. What is the correct HTML element for inserting a line break?

- A) `<break>`
- B) `
`
- C) `<lb>`
- D) `<newline>`

Answer: B

Explanation: `
` inserts a line break without starting a new block.

Quiz

6. Which tag is used to create a hyperlink?

- A) <link>
- B) <a>
- C) <href>
- D) <hyper>

Answer: B

Explanation: <a> tag is used to create hyperlinks using the href attribute.

Quiz

7. How can you open a link in a new tab/browser window?

- A) ``
- B) ``
- C) ``
- D) ``

Answer: B

Explanation: `target="_blank"` opens the link in a new tab.

Quiz

8. Which tag is used to create a dropdown in HTML?

- A) `<input type="dropdown">`
- B) `<dropdown>`
- C) `<select>`
- D) `<list>`

Answer: C

Explanation: `<select>` with `<option>` elements creates a dropdown.

Quiz

9. How do you create a numbered list in HTML?

- A) ``
- B) ``
- C) `<dl>`
- D) `<list>`

Answer: B

Explanation: `` creates an ordered (numbered) list.

Quiz

10. Which HTML attribute is used to define inline styles?

- A) styles
- B) style
- C) class
- D) font

Answer: B

Explanation: style attribute is used to apply inline CSS.

Quiz

11. Which HTML element is used for inserting an image?

- A)
- B) <image>
- C) <pic>
- D) <src>

Answer: A

Explanation: The tag is used to embed images using the src attribute.

Quiz

12. What does the "alt" attribute in the tag specify?

- A) Image size
- B) Image alignment
- C) Alternative text
- D) Image source

Answer: C

Explanation: The alt attribute defines alternative text if the image cannot be displayed.

Quiz

13. Which input type defines a slider control?

- A) range
- B) slider
- C) scale
- D) scroll

Answer: A

Explanation: `type="range"` creates a slider input.

Quiz

14. Which tag is used to define a table row?

- A) `<td>`
- B) `<th>`
- C) `<tr>`
- D) `<table-row>`

Answer: C

Explanation: `<tr>` is used to define a row in a table.

Quiz

15. Which tag defines a cell in a table?

- A) <cell>
- B) <column>
- C) <td>
- D) <th>

Answer: C

Explanation: <td> defines a standard table cell.

Quiz

16. What is the correct HTML for making a checkbox?

- A) `<input type="check">`
- B) `<input type="checkbox">`
- C) `<check>`
- D) `<checkbox>`

Answer: B

Explanation: The correct input type is checkbox.

Quiz

17. Which tag defines emphasized text?

- A) `<italic>`
- B) `<bold>`
- C) ``
- D) ``

Answer: C

Explanation: `` is used for emphasized (italicized) text.

Quiz

18. Which HTML tag makes text bold without implying importance?

- A) ``
- B) `<bold>`
- C) ``
- D) ``

Answer: C

Explanation: `` makes text bold visually but without semantic importance.

Quiz

19. The `<hr>` tag is used to:
- A) Draw a horizontal line
 - B) Insert a header rule
 - C) Define a heading rule
 - D) Add a hard return

Answer: A

Explanation: `<hr>` inserts a horizontal rule (line).

Quiz

20. Which tag is used to define the footer of a document or section?

- A) <bottom>
- B) <end>
- C) <footer>
- D) <section-footer>

Answer: C

Explanation: <footer> defines the footer for a document or section.

Quiz

21. The `<iframe>` tag is used to:

- A) Add image frames
- B) Embed another document
- C) Create form layout
- D) Define a footer

Answer: B

Explanation: `<iframe>` embeds another HTML page inside the current one.

Quiz

22. What is the correct syntax to refer to an external CSS file?

- A) `<style src="styles.css">`
- B) `<link rel="stylesheet" href="styles.css">`
- C) `<css href="styles.css">`
- D) `<style href="styles.css">`

Answer: B

Explanation: The `<link>` tag with `rel="stylesheet"` and `href` is correct.

Quiz

23. Which tag is used to define a form?

- A) `<form>`
- B) `<input>`
- C) `<fieldset>`
- D) `<submit>`

Answer: A

Explanation: The `<form>` tag is the container for form elements.

Quiz

24. What is the correct HTML for creating a text input field?

- A) `<input type="text">`
- B) `<textbox>`
- C) `<input text>`
- D) `<textinput>`

Answer: A

Explanation: `type="text"` creates a text input.

Quiz

25. Which tag is used to define a list item?

- A) ``
- B) ``
- C) ``
- D) `<list>`

Answer: A

Explanation: `` defines list items inside `` or ``.

Quiz

26. What is the default alignment of content inside a `<div>`?

- A) Center
- B) Right
- C) Left
- D) Justified

Answer: C

Explanation: Text inside a `<div>` is aligned to the left by default.

Quiz

27. Which HTML tag defines a navigation section?

- A) <navigation>
- B) <menu>
- C) <nav>
- D) <section nav>

Answer: C

Explanation: <nav> is a semantic tag for navigation links.

Quiz

28. Which HTML element is used to specify a header for a document or section?

- A) <head>
- B) <header>
- C) <top>
- D) <heading>

Answer: B

Explanation: <header> defines a section header, <head> is for metadata.

Quiz

29. Which tag is used for inserting a comment in HTML?

- A) `<!-- Comment -->`
- B) `// Comment`
- C) `** Comment **`
- D) `# Comment`

Answer: A

Explanation: HTML comments start with `<!--` and end with `-->`.

Quiz

30. Which HTML tag is used to play video files?

- A) <media>
- B) <video>
- C) <movie>
- D) <vid>

Answer: B

Explanation: <video> is used to embed video content.

Quiz

31. Which tag is used to make text italic?

- A) `<italic>`
- B) `<i>`
- C) `<ital>`
- D) ``

Answer: B

Explanation: `<i>` makes text italic visually.

Mini Project

Personal Portfolio Website

Objective:

Design a personal portfolio website using only HTML that showcases your identity as a budding web developer.

Requirements:

- A homepage with your name, image, short introduction.
- A section listing skills (using list elements).
- A section showcasing 2–3 mini-projects with headings and descriptions.
- A contact form with fields for name, email, message.
- Use `<header>`, `<nav>`, `<section>`, `<footer>` appropriately.
- Use `<fieldset>` and `<legend>` for grouping form elements.

Mini Project

Online Course Catalog for ChiPi Technologies

Objective:

Create a structured course listing page for ChiPi Technologies using HTML.

Requirements:

Add a heading with the ChiPi Technologies name.

Use a description paragraph to explain the mission.

Use a table to list at least 5 courses with:

- Course Name

- Duration

- Instructor

- Fee

Include a list of eligibility criteria.

Add a simple form for students to register interest with fields: name, course, email, and phone.

Mini Project

Restaurant Menu Page

Objective:

Create a digital menu for a fictional restaurant using only HTML.

Requirements:

- A welcoming heading with restaurant name.
- A short introductory paragraph.
- Use sections to display categories like Starters, Main Course, Desserts, and Beverages.
- Use `` or `` to list food items under each category.
- Use `<table>` to show combo offers with price and dish details.
- Add a feedback form at the bottom with rating (radio buttons), and suggestions (textarea).

Mini Project

Job Application Form

Objective:

Build a professional HTML-only form for job applicants to submit their profile.

Requirements:

- **Heading:** “ChiPi Technologies - Job Application Form”
- **Input fields:**
 - Full Name
 - Email
 - Phone
 - Position Applied For (Dropdown)
 - Resume Upload (Just show file input, no upload functionality)
- **Gender (Radio buttons)**
- **Skills (Checkboxes)**
- **Submit and Reset buttons**
- **Use** `<form>`, `<fieldset>`, `<label>`, `<input>`, `<select>`, `<textarea>`

Mini Project

Online Event Registration Page

Objective:

Develop a simple HTML structure for registering attendees for a tech webinar or event hosted by ChiPi Technologies.

Requirements:

- Page title and heading with event name.
- Event details: date, time, agenda (use `<dl>`, `<dt>`, `<dd>` or paragraphs).
- Add a registration form with:
 - Name
 - Email
 - Phone number
 - Track selection (Technical / Non-technical)
 - Meal preference (Veg / Non-Veg)
 - Submit button
- Use semantic tags to improve structure: `<article>`, `<aside>`, `<section>`, `<footer>`
